

1. Cookies

Make your own .js library to create, display and delete cookies, then use it in creating the required cookies to display a greeting message to your visitor with displaying an image as his profile pic referring to his gender, and inform him with his number of visits to the site. Display username and number of visits with font color according to his choices.

Replace the registration page with the profile page using location object the library should have the following functions:

- `getCookie(cookieName)`:
 - o Retrieves a cookie value based on a cookie name.
- `setCookie(cookieName,cookieValue[,expiryDate])`:
 - o Sets a cookie based on a cookie name, cookie value, and expiration date.
- `deleteCookie(cookieName)`:
 - o Deletes a cookie based on a cookie name.
- `allCookieList()`:
 - o returns a list of all stored cookies
- `hasCookie(cookieName)`:
 - o Check whether a cookie exists or not

Note: Do not use `<form>` tag

AJAX & JSON

find out the rockbands.json file to make a page with 2 dropdown lists, the 1st one is filled with the band and the 2nd one is filled with the artist after selecting a band from its dropdown list. Once the user selects an artist of the band; open his link
